USG 6053

Mr. Peter Simshauser
Chief Counsel
National Highway Traffic Safety Administration
NHTSA West Building W41-227
1200 New Jersey Avenue, SE
Washington, DC 20590

Subject: 49 CFR 575.105 Consumer Information – Rollover Label

Dear Mr. Simshauser,

In accordance with Subpart A, Paragraph 575.6(d)(1)(i), Consumer Information Regulations, General Motors LLC (GM) submits a copy of its Consumer Information rollover label information for utility vehicles as defined in Subpart B, Paragraph 575.105(c).

For the 2026 model year, GM will produce seven (7) utility vehicles as defined in 575.105. These are:

- Buick : Encore GX, Envision, Envista.
- Chevrolet: Equinox, Trailblazer, Trax.
- GMC: Terrain.

These vehicles use a combined rollover and air bag warning label as described in 575.105(d)(iv)(B). The lettering for the rollover warning and air bag warning is surrounded by a solid border and separated by a distance greater than 1 cm. The labels on all vehicles are visible in the stowed position so that no rollover alert label or air bag warning alert labels are necessary. Illustrations of the labels and their positioning on the driver's sun visor are attached. Also, in the attached is the rollover information included in the owner's manual as required by Paragraph 575.105(d)(4).

Should the information provided need to be revised in the future, GM will advise the NHTSA accordingly. Please feel free to contact me or Hoang Ngo (huy-hoang.d.ngo@gm.com) with any questions you might have.

Sincerely,

John Capp, Director
Vehicle Safety Technology, Strategy & Regulations
Global Product Safety, Systems and Certification
General Motors LLC, North America

Driver's Sun Visor.

- Buick Encore GX.
- Buick Envision.
- Buick Envista.
- Chevrolet Equinox.
- Chevrolet Trailblazer.
- Chevrolet Trax.
- GMC Terrain.

Label Detail

Owner's Manual Excerpt (Same for All)

Driving Information

Driver Behavior

Driving is an important responsibility. Driver behavior, the driving environment, and the vehicle's design all affect how well a vehicle performs. Being aware of these factors can help in understanding how the vehicle handles and what can be done to avoid many types of crashes, including a rollover crash. Most serious injuries and fatalities to unbelted occupants can be reduced or prevented by the use of safety belts. In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a safety belt. In addition, avoiding excessive speed, sudden or abrupt turns, and drunken or aggressive driving can help make trips safer and avoid the possibility of a crash.

Driving Environment

Be prepared for driving in inclement weather, at night, or during other times where visibility or traction may be limited, such as on curves, slippery roads, or hilly terrain. Unfamiliar surroundings can also have hidden hazards.

Vehicle Design

Utility vehicles have a significantly higher rollover rate than other types of vehicles. This is because they have a higher ground clearance and a narrower track or shorter wheelbase than passenger cars. While these design characteristics provide the driver with a better view of the road, these vehicles do have a higher center of gravity than other types of vehicles. A utility vehicle does not handle the same as a vehicle with a lower center of gravity, like a car, in similar situations. Safe driver behavior and understanding of the environment can help avoid a rollover crash in any type of vehicle, including utility vehicles.
